In addition, the reactivity of the alpha i subunit with IgG molecules from the serum of an individual with Lambert Eaton Syndrome (LES) can be used as a diagnostic for the disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence encodes the alpha-1C subunit of a number channel. Calcium channels are membrane-spanning, multi-subunit proteins that allow controlled entry of calcium ions into cells. This leads to depolarisation events required for muscle contraction. The recombinant to depolarisation events required for muscle contraction. The recombinant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    characterise the alpha lc coding sequence, the initiation of translation and an alternatively spliced region. Q84655 sets forth one alpha lc coding sequence (alpha lc-1) and R71003 sets out its deduced AA sequence. Q87834 and R72607 set out another splice variant, designated alpha lc-2. Q84656 encodes an alternative exon for the IV S3 transmembrane domain. Other alpha lc variants can be constructed by selecting alternative amino terminal ends in place of the ends in Q84655 and Q87834 and/or inserting the alternative exon in the appropriate location (see Q84655 T). In addition, a nt. sequence (see Q84655 T) can be deleted or inserted to produce an alternative alpha lc
                                                                                                                         Calcium

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Numerous alpha lc-specific cDNA clones were isolated in order to characterise the alpha lc coding sequence, the initiation of translation and an alternatively spliced region. 084655 sets forth one alpha lc coding sequence (alpha lc-1) and R71003 sets out its deduced AA sequence. Q87834 and R72607 set out another splice variant, designated alpha lc-2. 084656 encodes an alternative exon for the IV S3 transmembrane domain. Other alpha lc variants can be constructed by selecting alternative amino terminal ends in place of the ends in Q84655 and Q87834 and of inserting the alternative exon in the appropriate location (see Q84655 FT). In addition, a nt. sequence (see Q84655 PT).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           11-AUG-1993;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cc glycoprotein, which is expressed on the surface of melanoma cells, cc and can be used as a marker for prostate cancer.

Cc and can be used as a marker for prostate cancer.

Cc this MuCl8 (humUCl8) cDNA sequence is different from the humUCl8 cDNA cells.

Cc given in Genebank accession number N28882, Z20931. The deduced amino acid compared to the compared to the compared to the published by compared to the compared to the presence of this glycoprotein has been correlated with the ability of compared to metastasize. MUCl8 is also associated with normal vascular cusume, and on the smooth muscle of venules, and it expresses compared to the capture of the method can be used as a diagnostic test for prostate cancer which has a relatively high potential for metastasis or which has metastasized. The physician can then choose the appropriate surgical, chemotherapeutic can be used to prevent metastasis of process.

              HCAPro.1 (R97230) and HCAPro.2 (R97231) are novel human haematopoietic cell antigens associated with stem cells. They are the respective products of nucleic acid sequences HCASeq.1 (T28819) and HCASeq.2 (T28820) obtd. from human CD34+ bone marro Expression systems are provided for prodn. of recombinant HCA proteins. The proteins are useful as stem cell marker proteins functional studies, and can also be used to produce antibodies that allow the purification of stem cells from haematopoietic antibodies.

Human activated leukocyte cell adhesion molecule (W06891) or ALCAM is a CD6 ligand present on the surface of thymic epithelial cells, monocytes, activated T-cells, and other cells. Its amino acid sequence was deduced from cDNA clones (T46075) obtd. from HL60 and T-cell lines. ALCAM polypeptides can be produced, e.g. as a fusion proteins, in transformed host cells. They are useful for inhibiting CD6/CD6 interactions between colls.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Misc-difference

This polypeptide is a human CD6 ligand (see W47088), designated activated leukocyte-cell adhesion molecule (ALCAM), that is present on the surface of thymic epithelial cells, monocytes, activated T cells and a variety of other cells. Its amino acid sequence was deduced from cDNA clones (see V13954) isolated from human T cell and HL60 cDNA libraries. It is the human homologue of chicken BEN, and shows homology to neurolin, RAGE and MUC18. Anti-CD6 ligand antibodies, or their binding fragments, are useful for inhibiting binding of CD6 present on the surface of a first cell to that present on a second cell. CD6 ligands and anti-CD6 ligand antibodies are also useful in screening test compounds for the ability to inhibit binding of CD6 ligand to an anti-CD6 ligand ability to inhibit binding of CD6 ligand to an anti-CD6 ligand
                                                                                                                                                                                                                                                                                                                                                                                                                               Aruffo A,

They are the respective products of nucleic acid sequences HCASeq.1 (T28819) and HCASeq.2 (T28820) obtd. from human CD34+ bone marrow. Expression systems are provided for prodn. of recombinant HCA proteins. The proteins are useful as stem cell marker proteins in functional studies, and can also be used to produce antibodies that allow the purification of stem cells from haematopoietic and

The method is used to identify genes whose expression is responsive to a specific stress. The identified genes are employed in determining risk associated with a physiological or disease state. The risk determination methods are used for testing a medicament for gene therapy. These medicaments, or genes identified by the method of the invention, are used for treating, preventing or controlling a physiological or disease state (especially osteoporosis or toone density or other factors causing or contributing to osteoporosis or its symptoms or other conditions involved in mechanical stress or its lack. The methods can also be used for advancing research or studies in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2214 rlpaqqsltlqclaqgkpvpqmr 2236
                                                             This invention describes novel Robo (roundabout) polypeptides, involved in nerve guidance which heve been isolated from Drosophila sp., c. elegans, human and murine samples. The products of the invention can be used to raise anti-Robo antibodies, which can be used to modulate cell be used to raise anti-Robo antibodies, which can be used to modulate.
                                                                                                                                                                                                                                                                                                                                                                  WO9920764-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Y08402;
